Somerville, MA: 29 January 2008

Arrowstreet is once again taking an active role in the Northeast's largest green building and clean energy event. The firm is serving as a supporting sponsor of BuildingEnergy08 and will participate in two workshops during the three-day event. Sponsored by the Northeast Sustainable Energy Association (NESEA), Building Energy will be held in Boston from March 11-13, 2008.

Among the workshops Arrowstreet will participate in are:

Tuesday, March 11th, 9:00-12:00

Rubber at the Road: An In-Depth Look at the EpiCenter

Speakers: Patricia Cornelison, Arrowstreet Principal
Andrew Motta & Susan Rodgeron, Artists for Humanity

Join us for an in-depth discussion and tour of the Artists for Humanity EpiCenter. The building is designed as a model of environmental stewardship through low-cost, low-tech design features. We will look at the strategy for meeting the LEED platinum rating within a tight budget and post occupancy metrics on building systems.

Tuesday, March 11th, 2:00-5:00 & Wednesday, March 12th, 4:00-5:30

Daylighting Analysis: Tools for Modeling and Simulating Performance

Speakers: Dennis Carlberg, Arrowstreet Principal
Leo Dwyer, CNI Tram Law Inc.

This workshop is intended to de-mystify daylighting analysis by examining the use of tools commonly used by architects today. The workshop will focus on the use of physical modeling tools and techniques for qualitative and quantitative analysis. It will also examine the use of mainstream 3D computer modeling programs such as Google SketchUp and Autodesk's Revit for quick qualitative studies.

For more information on how to register for the 2008 NESEA Building Energy Conference, please visit www.buildingenergy.nesea.org.
