Somerville, MA: 15 September 2008

Arrowstreet is pleased to announce its collaboration with Dan Winny Architect to create a new life sciences initiative. The pairing combines the years and depth of experience of both firms to offer architecture, planning, interior design, and environmental graphics services to owners and developers of life science facilities.

The Arrowstreet/Winny team has worked on several lab projects together and is currently collaborating on a commercial research lab for MIT Investment Management Company in Cambridge, Massachusetts.

Arrowstreet is responsible for the core/shell design for three recent lab buildings in Cambridge as well as a number of downtown and suburban office buildings. Based in Somerville, MA, the firm's portfolio includes - in addition to life sciences clients - institutional, major mixed-use, retail, commercial, and hospitality clients in places as diverse as Iceland, China, and Argentina.

Dan Winny Architect specializes in the planning and design of facilities for the life sciences. He has served the life science industry for over 20 years, representing developers, institutions, design teams, landlords, and tenants both as a consultant and designer. With Lyme Properties, Dan pioneered the concept of the university-related urban research park, and implemented innovative projects such as the LEED platinum certified Genzyme Center in Cambridge and the Center for Life Science in Boston, MA.
